

Rotating Car Signs™

THANK YOU FOR YOUR ORDER!

Please share your experience with our product by leaving us feedback on Amazon.

Quick-Start Video Directions

- Slip the mounting clip onto the level part of the window (usually rear window) & roll it up.
- Slide the panel onto the pole so that the panel freely rotates toward the back of the vehicle.
- Before driving, **lock the window control switch** to avoid mistakenly lowering the window and losing your Stic-it®.
- If incorrectly mounted to rotate to the front, no worries. You'll hear a click as the panel self-corrects as the vehicle moves forward.

Note: If your car has rain guards, Stic-it® will not clip onto windows.

What to Expect

Easy On/Off | Durable | Car-Friendly | Eye-Catching

A unique combination of design features energizes patented Stic-it® with a distinctive, attention-getting rotating motion. While the angle of the mounted Stic-it® varies with differing window angles, it maintains its rotation features. Stic-it® operates as intended in a wide variety of road and weather conditions.
